

CMSC436 Project: Sudoku Puzzle

Project Team 27

Ben Horton

Ben Romalis

Mateos O'Connor

We have accomplished our goals of implementing the back-end logic. We have set up the methods to generate the entire board, but we still need to determine the appropriate algorithm to make sure only one unique solution remains when removing numbers from the board. When it comes to the UI we are just left with the task of touching up some of the features we have already implemented. The last thing we are working on is making the board allow you to erase cells and input numbers into them. We are on track and possibly even a bit ahead of our expected schedule.
